

USERS GUIDELINE

www.aura-smart.com

INITIAL SETUP

1. Upon unboxing Aura, the device is to be plugged into the mains via the terminal block at the back.
2. A Convenient spot can be identified for Aura to be mounted – preferably an area which is utilized more often than the rest.
3. Two wires will be terminated at each end of the Terminal Block following which the device will Power-On.
4. Upon Powering-On the Device, we proceed to setup the Device as follows.

INITIAL Wi-Fi SETUP PROCESS

STEP 1

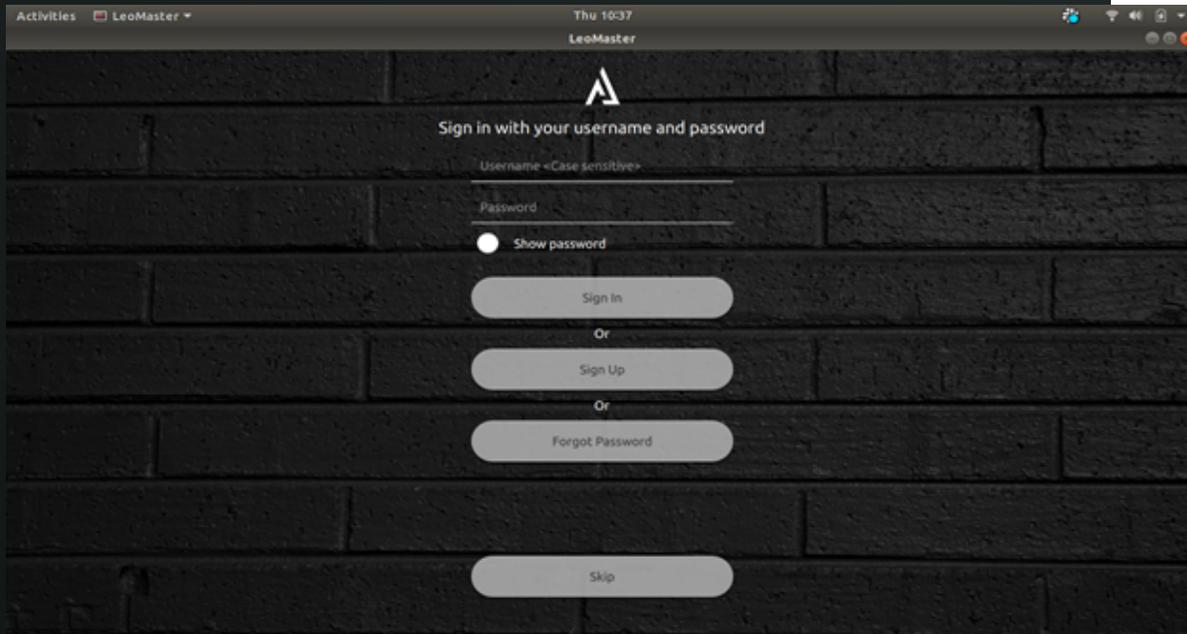

This page is first loaded page if the device is new. The page is populated with the available Wi-Fi networks in the Aura devices locality. Users have to select a network to connect it, if it is a protected network users will be prompted to enter the password

STEP 2

On successfully connecting to network the application automatically navigate to the next page. Users can also skip connecting to a network by pressing “Skip”.

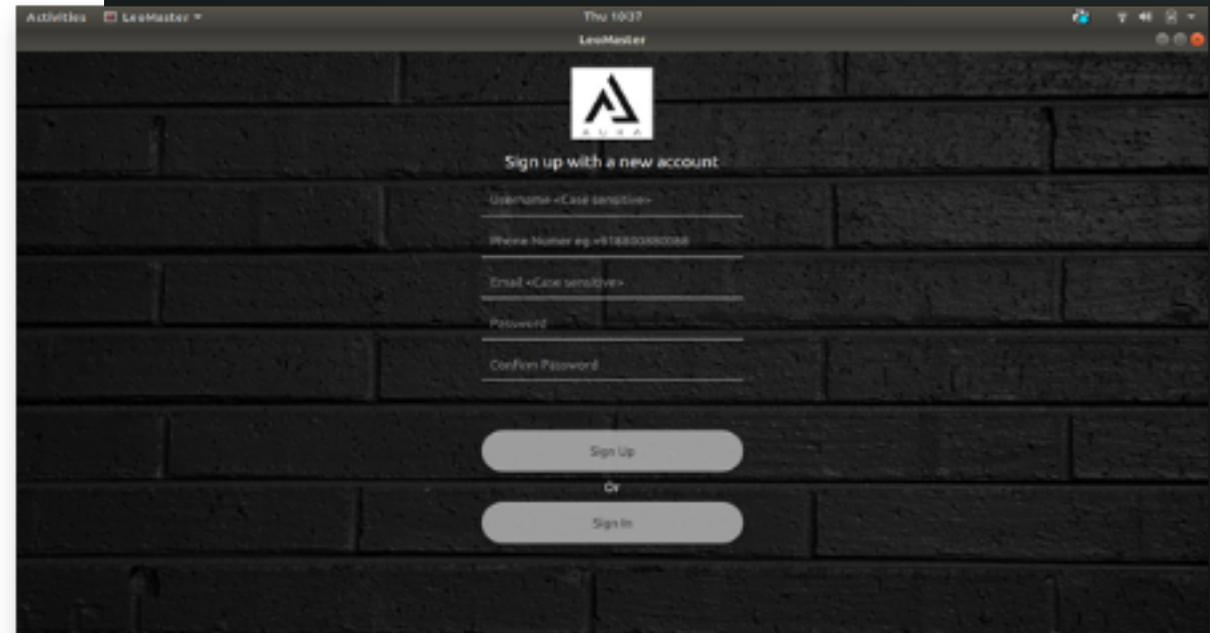

INITIAL SIGN-IN/SIGN-UP PROCESS

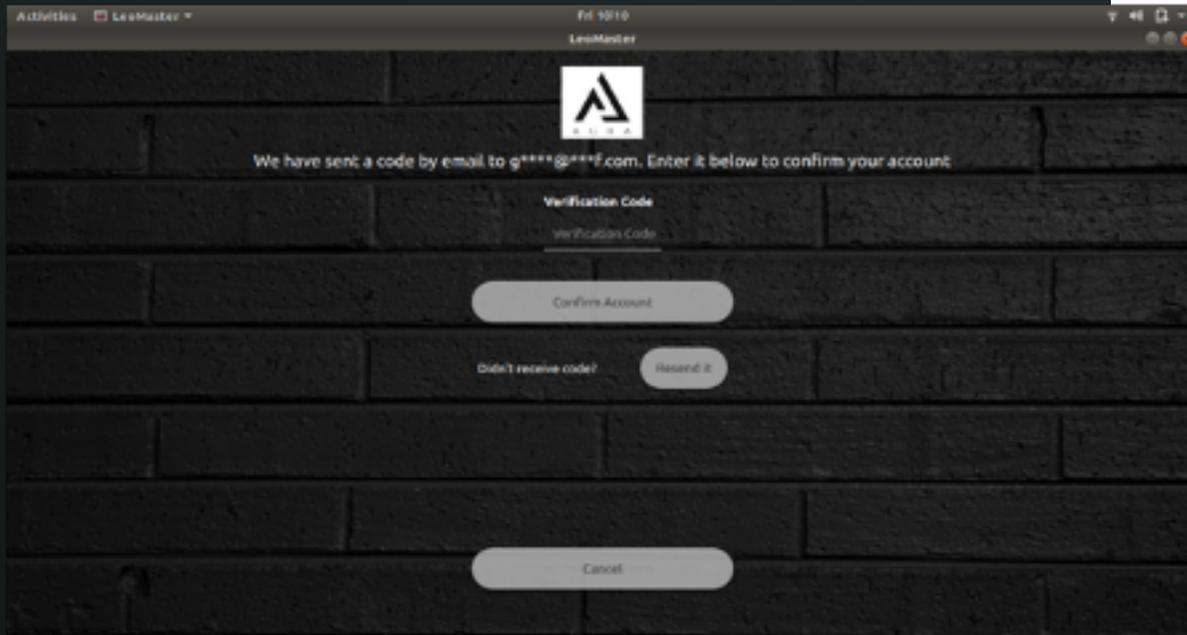

STEP 1

Here the user can Sign-In if they already have an account created else can create a new account by pressing “Sign-Up” and then entering all the required details.

STEP 2

If Sign-Up is successful a verification code will be sent to the email id which has to be entered in the prompt.

Aura Device Naming Process

STEP 1

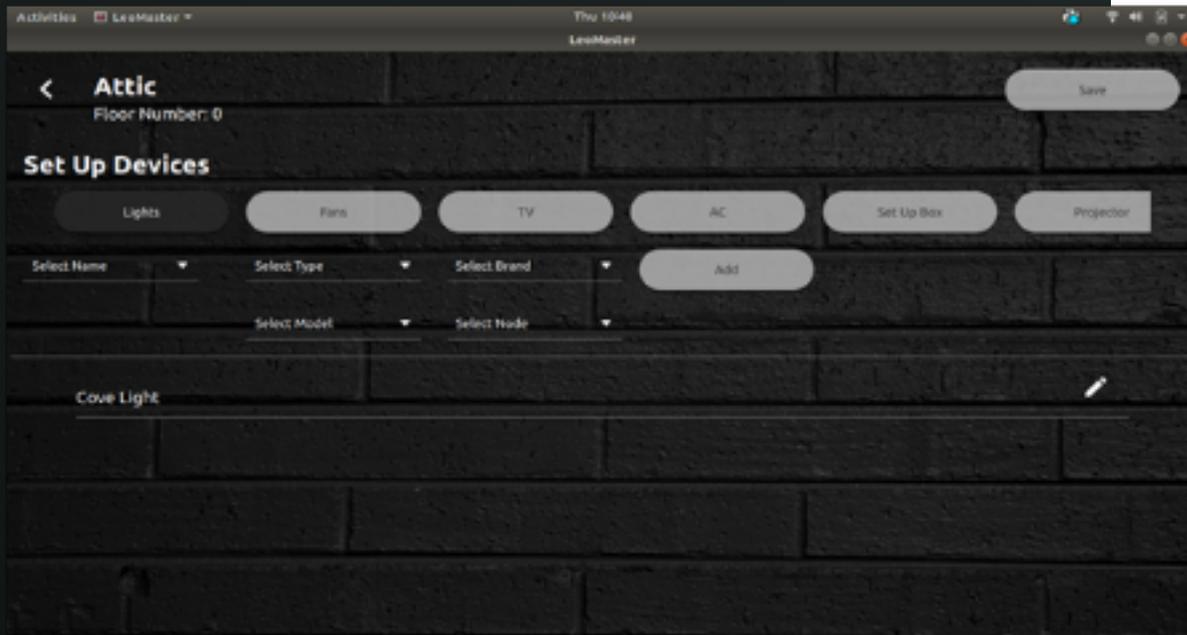

User can give a unique name to their device.

ADDING A NEW ROOM

STEP 1

User can select a room name and floor number from the combo box and press on an appliance icon that they want to add to Aura Device.

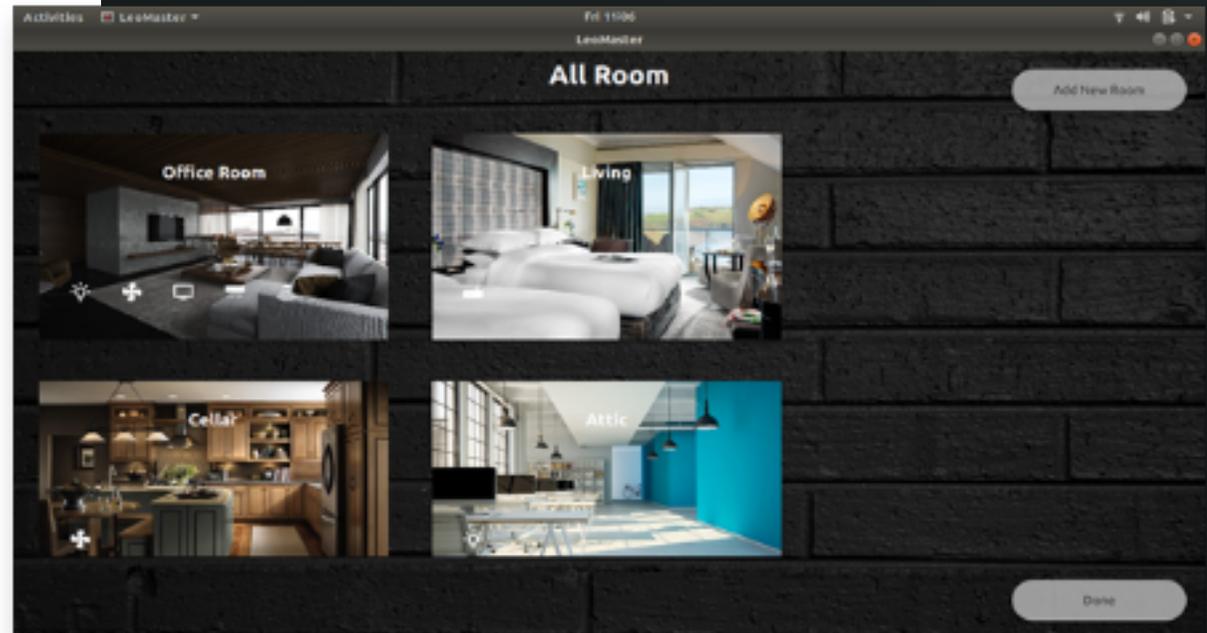

STEP 2

Here user can select the device name, type, brand, model and node details and proceeds to add. User can also change the type of appliance by selecting the particular tab bar. Addition process for IR remote (TV, AV, AC, Set top box, projector, DVD) completes only after user checks all the buttons and save it. Addition of Z-Wave device include user pressing the action button on the Z-Wave devices as prompted.

STEP 3

Once device addition is completed and saved all the rooms and devices for that particular room are shown. More rooms can be added by pressing “Add More Rooms”. When “Done” is pressed all saved details are uploaded to cloud and the control panels get prepared.
